Hi Jen;

This looks great. I was wondering if you had given any thought to combining the pdi work plan for the vertical profile boring and monitoring well installation into one work plan. You could say something along the lines that VPBs would be installed, as necessary, to support the design and construction of groundwater monitoring wells.

Also, in Paragraph C.1 on page 9, it calls for a 14 month project schedule, which I think is short for all of the RD activities. B.2 gives them 8 months to submit a PDI work plan for the VPBs and under B.3.v, they have an additional 8 months for the monitoring well installation activities. After that they have to complete the rest of the rd activities (35%, 65%, etc). thanks

Pete,

Attached is the most recent draft of the OU1 RD SOW.
